

Oriensys is a French company (Société à responsabilité limitée, registered January 2020) built around the expertise, network and professional achievements of one of its founders, Dr. Daniel P. Funeriu. Based on a European network of particularly high-level experts with significant leadership and results in large-system transformation processes, Oriensys activities will center on education, research and game-changing technologies. Its mission is to provide a systematic, experience-based approach to orienting decisions in an environment of unprecedented complexity as well as create educational content in fields ranging from science to humanities. Indeed, many private and governmental organizations are facing decisions of unparalleled complexity due to unprecedented amount of data available, making the decision process ever more complex and therefore more and more error-prone. The importance and timeliness of Oriensys mission therefore becomes apparent: assisting large organizations to take the correct decisions in order to design and execute their transformation processes, with a focus on organizations responsible of education and research, can lead to an improved and more cohesive, equitable and balanced society. Oriensys is based on collaboration between different types of organizations and experts, such as trainers, psychologists, physicians, teachers, with the aim of developing improved education programs.

The activities carried out :

- Skills development, social inclusion and transition from school to work, support and empowerment of disadvantaged young people:
- Preventing abuse and discrimination
- Behavior research studies
- Courses based on an innovative methodology, interactivity and cognitive behavioral observation of an individual, case studies, simulations, company programs, open workshops, or individual sessions.
- Project Management
- Social research
- Pilot projects in the social field
- Training and e-learning
- Validation of skills acquired informally

Oriensys is able to mobilize the highest expertise available to perform each particular task. Collaborates with top experts in: improving education, educational content, exact sciences, humanities and social sciences.

The members of the organization are engaged in promoting scientific research, also in cooperation with public and private, national and international scientific entities and organizations, organizing training courses, seminars, congresses, workshops, expertise on competency models, learning expertise, emotional.
